

STACK SPINE

LATEST-REAL-SEP-LITHOS-2026-STACK-SPINE · LOGIN-NEWEST · SPLIT-GATE · JDM
AIRLOCK · GATOR · SENTINEL

*Intelligence should move through relationships without acquiring sovereignty over them.
Everything else can be derived from that.*

LORE explains.
LAW constrains.
MATH formalises.
CODE enforces.
NODES execute.
HASHES identify.
RECEIPTS prove.
HUMANS choose.

Derivations

- A model can be powerful without owning the place.
- A node can execute without becoming the authority.
- A ledger can prove an event without becoming the entire application.
- Providers supply capability, never sovereignty.
- Something else can work on a Thing without owning the Thing, the Place, or the Human.

Vertical load

Layer	Verb	This preview
LORE	explains	canon/, history/
LAW	constrains	airlock/, glyphs, forbidden grants
MATH	formalises	identity, split, weight, receipt
CODE	enforces	src/
NODES	execute	Gator executes. Sentinel does not.
HASHES	identify	RFC 8785 + SHA-256
RECEIPTS	prove	in-memory evidence of a knot
HUMANS	choose	CURSOR ties the knot

Horizontal crossing — LOGIN-NEWEST

HUMAN → AIRLOCK → SPLIT → PLACE → SCOPE → WORK → RECEIPT → HOME

They meet at the JDM Airlock. Two doors. The gate stays split. Decider and executor do not become one login.

CURSOR_DOOR = human / may knot
TALON_DOOR = Gator or Sentinel / may not knot

Nodes

Gator is TALON that executes: search, build, route, remember, carry within place, execute within scope. Cannot knot, leave the place, acquire sovereignty, reset weight, erase scars, or become the cursor.

Sentinel maps the past, applies weight, attests scope, refuses illegal glyphs. Cannot execute Gator's work, cannot knot, cannot carry the past for the human.

Visual Grammar 06 (locked)

The system can map the past, but it cannot carry it for you.
Scar is evidence.
Weight is consequence.
Memory changes the next pull.

Math

- Identity: thingId stays. Representation hashes move. Identity is not the hash of current bytes.
- Split: $\text{mayKnot}(\text{CURSOR})=\text{true}$. $\text{mayKnot}(\text{GATOR})=\text{mayKnot}(\text{SENTINEL})=\text{false}$. Same id cannot occupy both chambers.
- Weight: $W \leftarrow W \cup \text{constraint}(\text{scar})$. Never reset. Duplicate scars do not double-count. nextPull demands requires.
- Receipt: SHA-256 of RFC 8785 canonical JSON. Integrity digest. DEMO-ONLY. Not a digital signature.
- Typestate: Sentinel cannot execute. Gator cannot attest. Human alone commits KNOT.

Honesty

Authorization DEMO-ONLY. Ledger IN-MEMORY. Networked nodes ABSENT. Passport ABSENT.
Native apps ABSENT. Form conversion ABSENT-HERE (HANDOFF 002 lives on another branch).
HANDOFF 001/002 essays are not replaced by this spine.

Proof

npm test · runLoginNewest(): Josh arrives; split Gator and Sentinel; make fails; scar stays; Sentinel maps without carrying; weight requires support; retry without it fails; human grants support; Gator executes; human knots; receipt hashed.

SAME PLACE → TWO NODES → HISTORY INTACT → WEIGHT NOT RESET.
